Powering the Future: 230kW Solar PV Project

www.weatherproofing.co.uk

Weatherproofing Advisors were appointed to carry out a major roof refurbishment project in Glasgow

The Problem

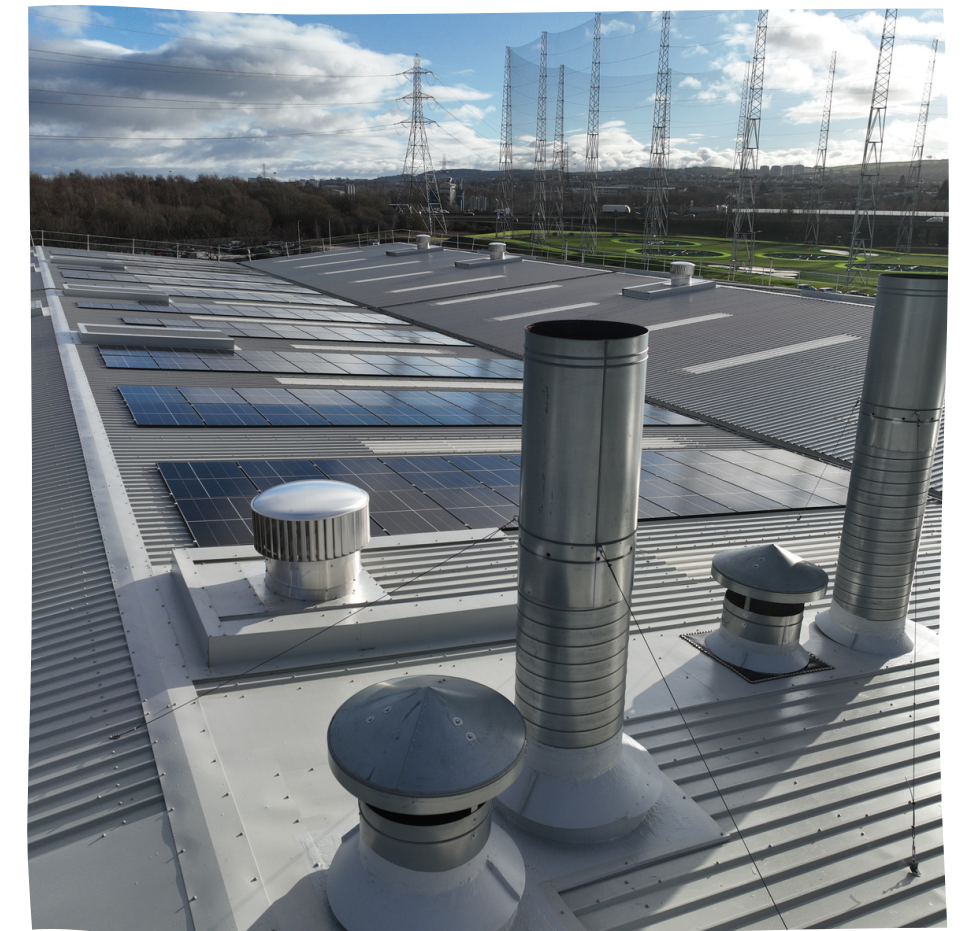

In conjunction with contract administrators, Weatherproofing Advisors engaged with the Client to establish ongoing water ingress issues. The main workshop roof consisted of aged asbestos cement profiled sheets with several attempts of patch repairs over the years. Given the fragility and age of the roof, access was problematic and WPA utilised its commercial Drone license to provide a full photographic roof survey condition report. The adjacent flat roof office building and metal profiled wash bay were also considered for long-term maintenance proposals.

Given the nature of internal business operations and general activity on site, Weatherproofing Advisors ensured the most practical solution for long-term maintenance was considered, allowing the business to fully function during the refurbishment process.

The Solution

A roof oversheet was considered the most effective solution for the business and the Client took advantage of upgrading new roof ventilation systems and installation of PV panels to improve the energy efficiency of the building. We engaged with the key contractors involved in the refurbishment works with ongoing interface between the various works carried out on site. WPA provided advice for ongoing maintenance requirements and a new permanent edge guardrail was installed by Weatherproofing to the perimeter of the building.

A new bituminous felt system was installed to the office roof and metal profiled roof oversheet to the wash bay, providing further long-term guarantees for the site.
